

**Vigilant for Basics Features**

## BILL OF MATERIALS

Vigilant Bill of Materials is ideal for manufacturers or retailers who make or assemble the same article or group of products repeatedly.

Features of Vigilant for Basics Bill of Materials:

- Sets up bill of materials with parts (including sub assemblies) and labor
- Allows inclusion of set up time and manufacturing comments
- Non-stock items permitted
- Adds new products 'on the fly'
- Add new bill of material using similar bill as reference to save time
- Updates finished goods inventory when manufactured
- Unlimited parts in a bill
- Detailed on-screen sub assemblies notation
- Single or multiple phases to a bill
- Unlimited levels of sub-assemblies
- Fully on-line. Integrates to inventory
- Commits raw materials for manufacturing
- On-line "trail" build capability (requirements & shortages scenario) for material requirement planning
- Prints work orders with summary of materials required
- Relieves raw materials when manufactured and updates finished goods inventory
- Calculates cost of manufactured items based on first in/first out (FIFO)
- Reports include indented, costed & "where used" bill of material detail reports
